

Mirror and glass care & maintenance

How to clean mirrors and glass safely

FOLLOW THESE GUIDES TO KEEP YOUR MIRRORS AND GLASS IN OPTIMAL CONDITION

To clean mirrors and glass safely, use warm water and a soft, lint-free cloth. Wring all the water from the cloth before wiping the mirror/glass, then quickly dry it with another lint-free cloth.

Avoid spraying water or cleaners directly onto the mirror, glass or frame; instead, apply them to the cloth before wiping.

Avoid using abrasive, solvent-based, or chemical cleaners, as well as aerosols, as they can damage the mirror's/glass surface, edges, backing, and frame.

After cleaning, ensure thorough drying of all joints, edges, and the frame to prevent any liquid or cleaner from contacting the mirror's/glass edges, backing, and frame.
